

Migration scenarios for CRX2Oak

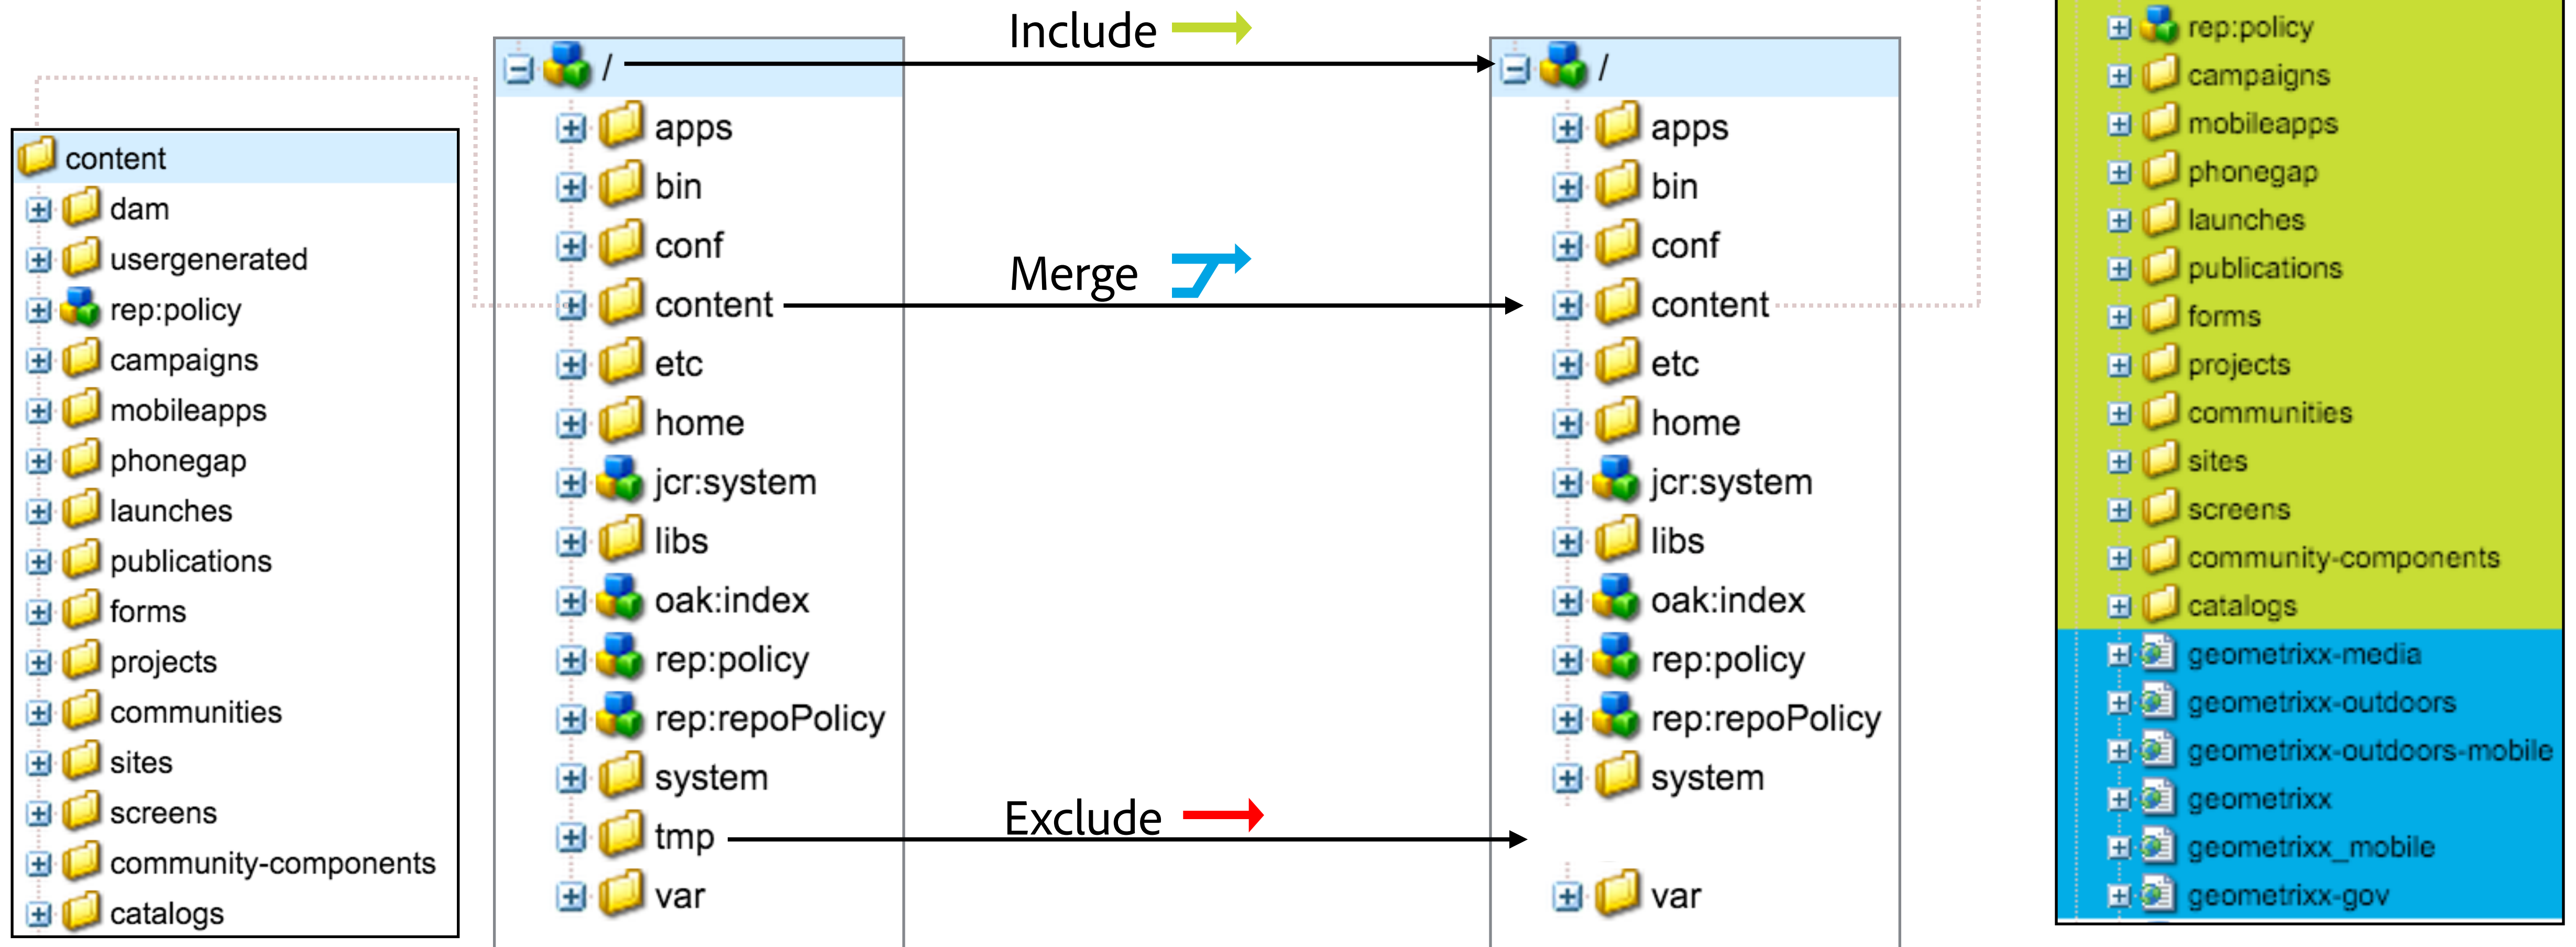

Tomek Rękawek | rekawek@adobe.com

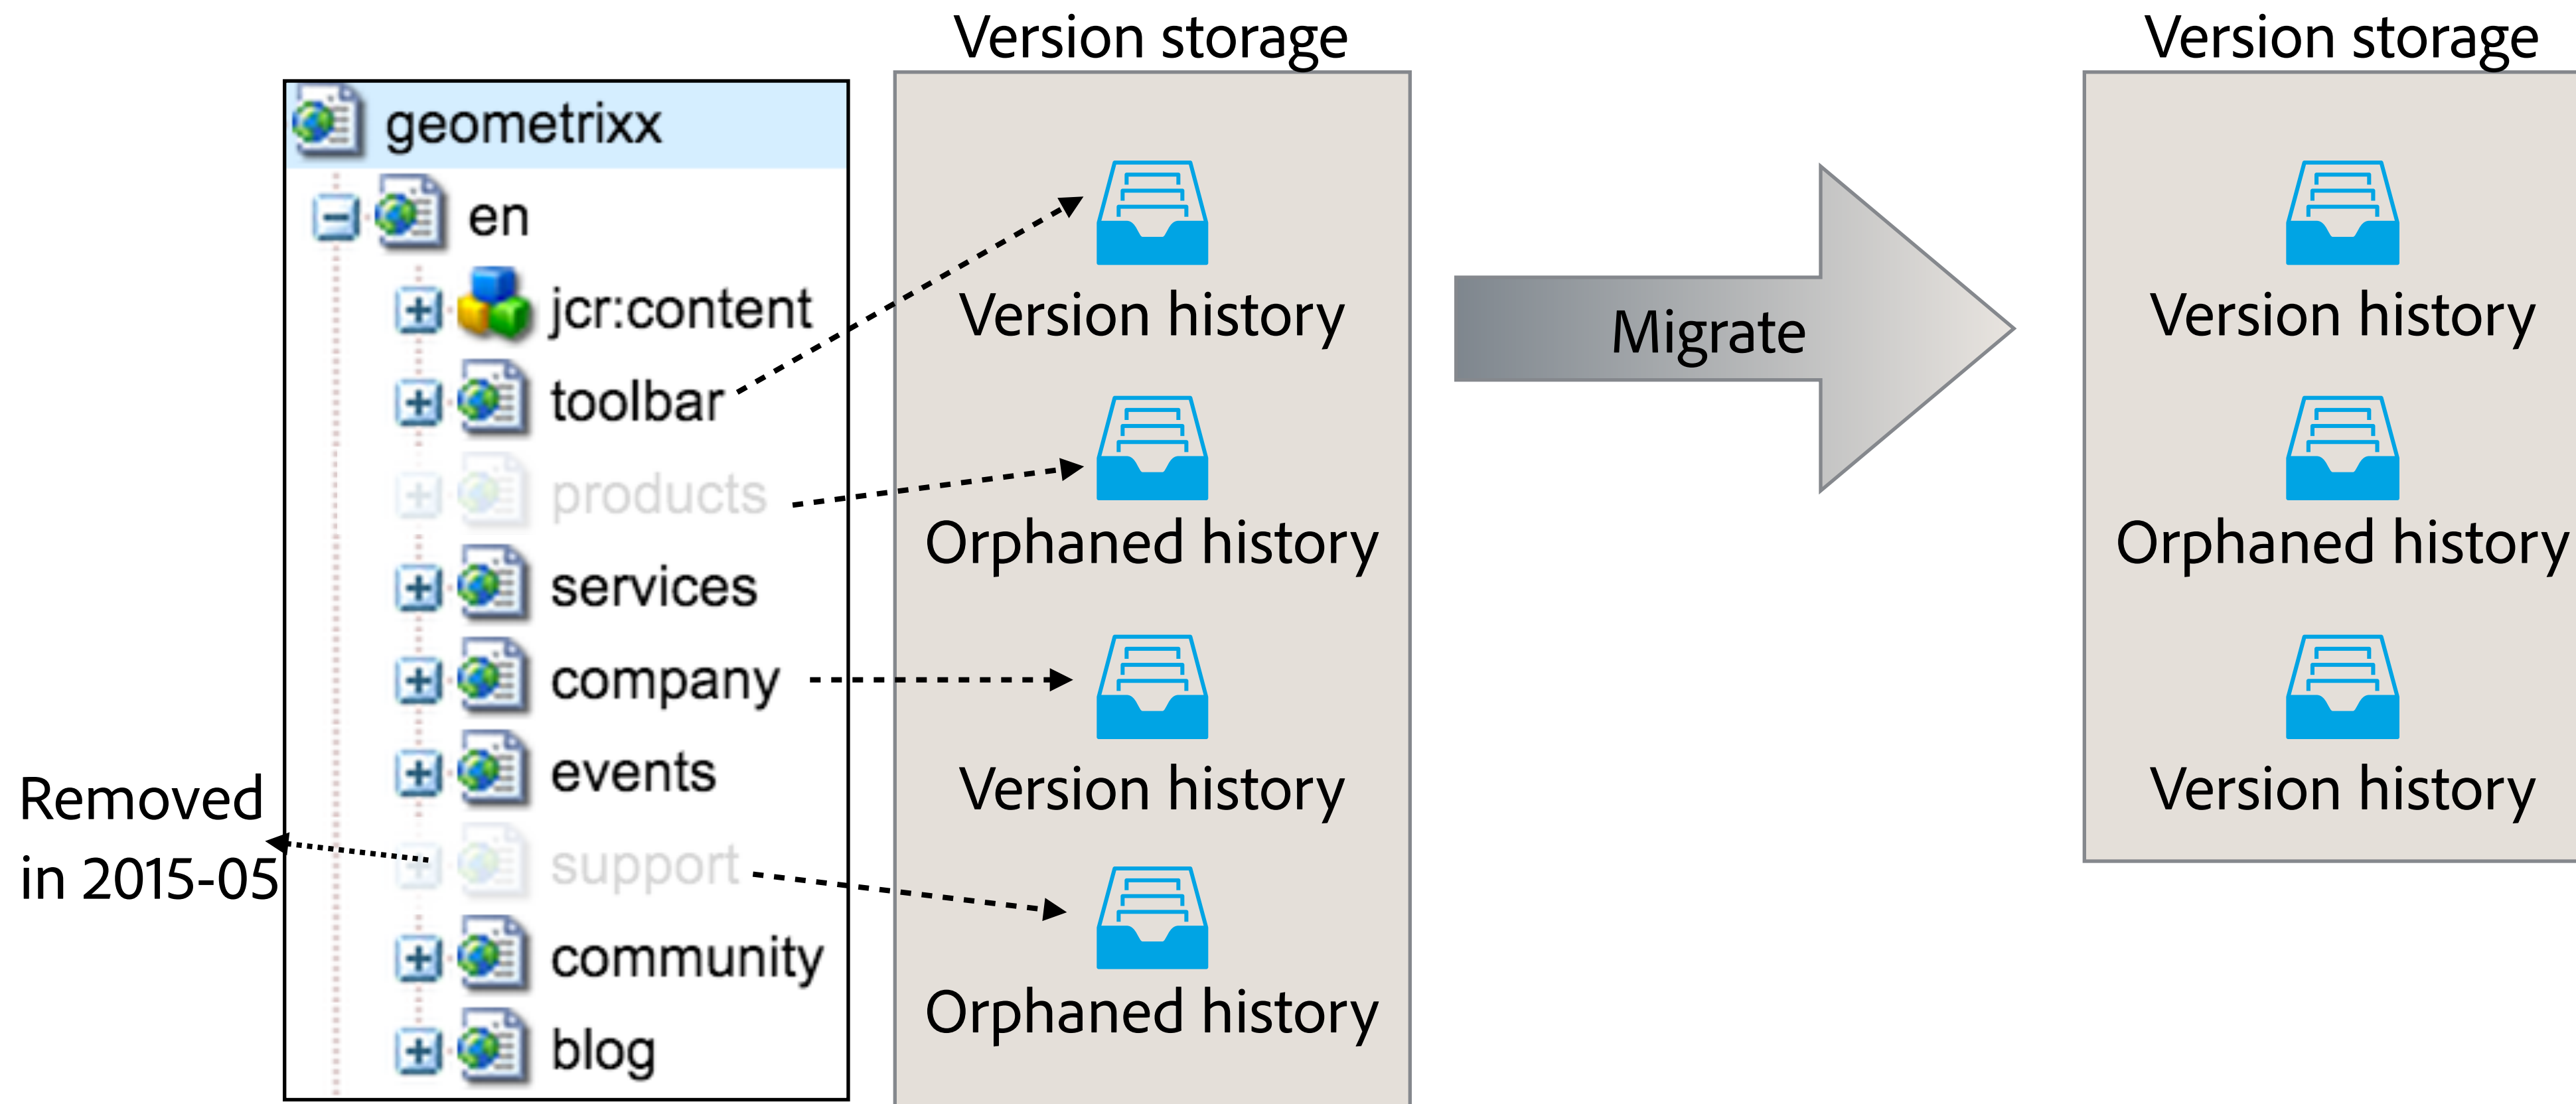

Selecting paths to migrate

```
java -jar crx2oak-*.jar old/repository new/repository \  
--include-path=/ --exclude-path=/tmp --merge-path=/content
```

Migrating version storage

```
java -jar crx2oak-*.jar old/repository new/repository \  
--include-versions=true --include-orphaned-versions=2015-10-01
```

Other features and tips

- Break migration with `^C` and resume after that
- Inject custom logic with `CommitHooks` and `RepositoryInitializer`
- Combine `--include-path` with `--copy-versions` to copy content with versions
- Use `--mmap` to increase `SegmentNodeStore` performance on UNIX systems

- CRX2Oak 1.3.0 - already available for Adobe customers!
- oak-upgrade 1.3.7 - open source version, supports Jackrabbit 2 rather than CRX2
 - <http://central.maven.org/maven2/org/apache/jackrabbit/oak-upgrade/1.3.7/oak-upgrade-1.3.7.jar>
- oak-upgrade documentation (all commands/parameters are the same for crx2oak)
 - <https://jackrabbit.apache.org/oak/docs/migration.html>
